The Power of Blue.®

Wind Tunnel Technology™

protects electrical components and PC boards from contamination.

Fan-On-Demand™

cooling system operates only when needed, reducing noise, energy use and the amount of contaminants pulled through machine.

Lift-Arc™ allows TIG starting without the use of high-frequency. Starts the arc without contaminating the weld with tungsten.

Adaptive Hot Start™ increases the output amperage at the start of a weld if necessary, eliminating electrode sticking.

Lightweight, aerospace-grade aluminum case offers protection with the benefit of reduced weight.

Standard built-in Pulsed MIG programs with synergic capability (see page 4).

XMT 350 MPa

**XMT 450 MPa —
Higher Output for
Demanding Applications.**

XMT 350 MPa Model Only

Auto-Line™ Power Management Technology allows for any input voltage hook-up (208–575 V) with no manual linking required, providing convenience in any job setting. Ideal solution for dirty or unreliable input power. (450 model is manual link.)

Dinse- or Tweco-style weld disconnects provide high-quality weld cable connections. (450 model utilizes studs.)

Build your own system at
MillerWelds.com/equiptoweld.

Inverter arc control

technology provides greater puddle control for superior 6010 Stick electrode performance, and outstanding MIG weld performance.

Line voltage compensation

keeps welding output constant even if input power varies by +/-10%. XMT 350 model further expands line voltage compensation to an amazing +37% and -59% when operating on 460 VAC.

Process selector switch

reduces the number of control setup combinations without reducing any features.

Large, dual digital meters are easy to view and are presettable to ease setting weld output.

Optional 115 VAC auxiliary

power provides 10 amps of circuit-breaker-protected power for water circulators, etc.

Power source is warranted for 3 years, parts and labor.
Original main power rectified parts are warranted for 5 years.
Gun warranted for 90 days, parts and labor.

MPa

MPa: M (MIG), P (Pulse), a (Advanced Arc Control). Advanced arc control enables an improved pulse welding arc. The operator has more control over puddle and bead characteristics using SharpArc™. In addition, the unit provides a more robust and stable arc at very low arc length, reducing heat input, and providing the ability to weld on a wider range of material thickness.

What are some benefits of Synergic Pulsed MIG?

1. Easy to setup
2. No more changing wire speed and then having to go back to reset the weld output.

SharpArc™

SharpArc controls welding arc cone width in Pulsed MIG (GMAW-P) welding mode.

If a gas is used other than what is listed on the Pulsed MIG welding program chart (below left), the SharpArc™ can be adjusted to help customize your arc to the gas being used.

Lower SharpArc™ settings widen the arc cone, increase puddle fluidity and flattens the weld bead.

Additional Features

Auto Remote Sense™ enables unit to automatically use remote control if connected to remote control receptacle.

Ultra-tough, polycarbonate-blended cover for control panel protects front controls from damage.

Synergic Pulsed MIG — Adding the S-74 MPa Plus feeder or the XR-AlumaFeed™ feeder gives you the benefit of a Synergic Pulsed MIG system. As you increase/decrease the wire feed speed, the pulse parameters increase/decrease, matching the right amount of power output to match the wire speed.
